

SIDDHARTH NEGI

Full Stack Developer

+91 7579156938 @ siddharthnegi.dev@gmail.com siddharthnegi.vercel.app github.com/imsiddharthnegi

SUMMARY

Full Stack Developer with hands-on experience across four internships and six shipped SaaS products. Proficient in React.js, Next.js, Node.js, PostgreSQL, and MongoDB. Experienced integrating REST APIs and LLM APIs (Claude, Gemini) into production applications — from building AI-powered lead generation platforms to full-stack writing SaaS. Comfortable across the stack, from designing RESTful backend services to shipping pixel-precise front-end UIs. AWS and GCP Certified Cloud Practitioner

SKILLS

JavaScript	Python	Tailwind CSS	React.js	Next.js	
Leaflet.js	Node.js	SQL	Express.js	Django	REST API
MongoDB	PostgreSQL	Supabase	Firebase	AWS	GCP
Docker	Vercel	Claude API	Gemini API	OpenAI API	Git
GitHub	Prisma	Stripe	Figma	Prompt Engineering	

PROJECTS

WritePro

- Built a full-stack AI writing SaaS using Next.js, Supabase, and Prisma with end-to-end features including user authentication, subscription billing via Stripe, and a real-time Claude API-powered editor
- Designed and implemented a project management dashboard with role-based access, demonstrating production-grade application architecture beyond a single-feature prototype
- Integrated Claude API to deliver context-aware writing suggestions inline, reducing friction in the content creation workflow for end users

LeadForge

- Developed an AI-powered lead generation platform using React.js and Claude API that scrapes, enriches, and scores prospects in real time, automating a workflow typically done manually in sales teams
- Built an intelligent qualification layer using Gemini API to evaluate lead quality against configurable criteria, reducing noise in prospect pipelines
- Deployed on Vercel with REST API integrations for live data enrichment, ensuring low-latency responses across the core user-facing flow

StyleMatch

- Built an AI-driven ecommerce recommendation engine where users complete a style quiz and receive personalized product matches with AI-generated explanations, integrated end-to-end with Stripe for checkout
- Designed the recommendation logic to map quiz responses to product attributes using JavaScript and PostgreSQL, creating a data-driven personalization layer without a third-party ML service

UrbanPulse

- Developed a civic data dashboard using Next.js, MongoDB, and Leaflet.js that visualizes real-time urban activity — traffic, events, and infrastructure-- on an interactive map canvas
- Connected MongoDB as the backend data store for city event records, designing schemas to support fast geospatial queries and efficient front-end rendering

EDUCATION

Bachelor of Technology in Computer Science & Engineering

Quantum University

09/2022 - 09/2026

EXPERIENCE

Full Stack Developer intern

Tech Vista

01/2026 - 06/2026

- Refactored React.js component architecture across core product views, reducing API response times by ~40% and improving page load performance for end users
- Redesigned MongoDB schemas to normalize data relationships, eliminating redundant queries and improving read efficiency across high-traffic endpoints

Web Developer Intern

LaunchedED Global

07/2025 - 12/2025

- Built and maintained responsive frontend interfaces using React.js as part of a full-stack team working across design, development, and deployment
- Managed the full feature lifecycle independently, including scoping, implementation, QA, and release, reducing handoff delays across the development cycle

Founding Engineer

Zero Monk

07/2024 - 06/2025

- Founded the tech function at a college ed-tech startup — owned full-stack architecture and shipped the core platform serving 300+ schools.
- Drove end-to-end development decisions independently, from backend infrastructure to frontend delivery, in a zero-to-one startup environment.
